Fight the Flight ***of Navel Orangeworm***

ISOMATE  **NOW Mist**

ISOMATE[®] VMB is sustainable pheromone mating disruption technology that delivers a consistent, uniform, release rate all season long.

Manage NOW

- 220+ day longevity for season-long control
- Pheromone release aligns with NOW activity
- Yearly use further reduces nut injury

Ease of use

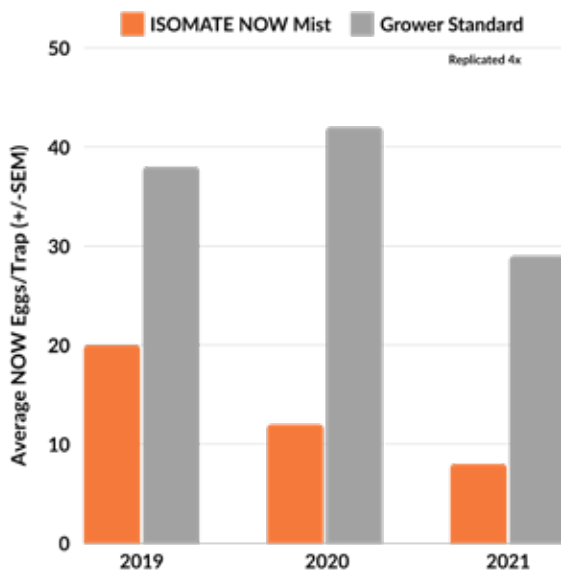

- Easy to deploy
- Automatic activation
- New emitter every year

Get Expertise

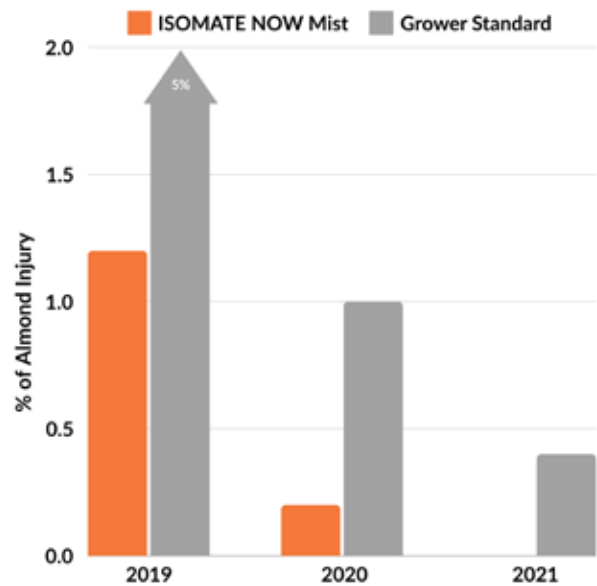

- We are *the* pheromone specialists
- Validated by independent research and UC
- Request custom deployment maps

Eggs

Injury

Our field trials are independently conducted, tested, and proven by UC, crop researchers, grower, and consultants.

Research Results

- Immediate and long-term reduction of NOW populations
- >70% reduction in harvest injury, mummy infestation, and egg laying
- Continued use results in population decline

Quick Facts

- 7.1 g a.i./can
- 1 unit/acre application rate
- Registered for use in tree nut crops

Questions?

Reach out to your California pheromone mating disruption specialist.

They can provide you with :

- Seasonal field follow up and unit inspection
- Custom hang patterns for crop specific products.
- Individual field mapping and hanging instruction for aerosol products
